(54) NOVEL HUMAN PHYSIOLOGICALLY ACTIVE POLYPEPTIDE

(57)Abstract:

NEW MATERIAL: A polypeptide containing an amino acid sequence of the formula (Symbols are respectively residues as follows; Gln is glutamine; Asp is aspartic acid; Pro is proline; Tyr is tyrosine; Val is valine; Lys is lysine; Glu is glutamic acid; Ala is alanine; Asn is asparagine; Leu is leucine; Phe is phenylalanine; Gly is glycine; His is histidine; Ser is serine; Thr is threonine; Ile is isoleucine; Trp is tryptophan; Arg is arginine; Met is methionine; Cys is cysteine).

USE: An antitumor and antiviral agent.

PREPARATION: Deoxyribonucleic acid is linked to an expression vector to give a recombinant DNA, which is used to form a transformant. The resultant transformant is then separated and cultivated to express the deoxyribonucleic acid in the above-mentioned transformant and produce the aimed polypeptide expressed by the formula.
